Discover your independence

Dolphin's range of computer access software

Three ways to access Windows®

Screen Reader, Screen Magnifier AND Braille display support.

SuperNova from Dolphin is the ultimate access software, unique in giving you three magnificent ways to access Windows applications. Decide what works best for you – magnification, speech, Braille or a combination of all three. Whether you're writing documents, shopping online, sending emails or looking for total accessibility for a public access environment; with SuperNova you've got absolute flexibility and choice.

Use the screen reader in conjunction with the magnification, ensuring that the text is easier and quicker to read or write. Alternatively, at the touch of a button, turn on the responsive and accurate speech facility for a boost if your eyes start to tire in the afternoon.

Intuitive internet access provides quick and easy keyboard access to even the most complex web sites, giving you the confidence to browse the internet with ease.

Magnify up to 60x, so you can enlarge... and enlarge... as you require throughout the day. The inbuilt image smoothing functionality will minimise any jagged edges, offering you smooth and easily readable characters.

Relax those tired eyes and reduce headaches, by switching to colours that reduce glare and are more comfortable for you.

Choose a magnification mode that suits you and your life. Move a magnifying glass over the screen, split and magnify a vertical or horizontal section or let your magnification follow you wherever you go. The options are endless.

Braille reader? SuperNova supports the complete range of refreshable Braille displays (Grades 1 or 2), including Braille keyboard input on supporting devices.

SuperNova is ideal for home, office, education or in larger corporate and Government organisations. Install it locally, across the network or take it wherever you go on a Dolphin Pen. It's powerful, reliable and so flexible that you can choose any possible combination of magnification, speech or Braille in a single stable application that suits your personal requirements.

SuperNova is a no compromise solution for any public access environment where providing a totally accessible IT solution is your first choice and your legal obligation. SuperNova combines all the unique features of Lunar's Screen Magnification and Hal's Screen Reader in one integrated core product. SuperNova ensures you can cater for all of your clients, irrespective of their sight levels.

Access software to deliver independence

See the bigger picture

Screen Magnifier for low vision users that's easier on the eyes.

If you're looking for screen magnification, the sky's the limit with Lunar. One click on the Lunar toolbar and everything on screen becomes magnified, effortlessly clear and instantly recognisable.

Text and images remain smooth and easy to read even with very high levels of magnification. And Lunar's magnification just keeps going, all the way to 60x, so you can enlarge... and enlarge... as the day goes on or as your sight changes.

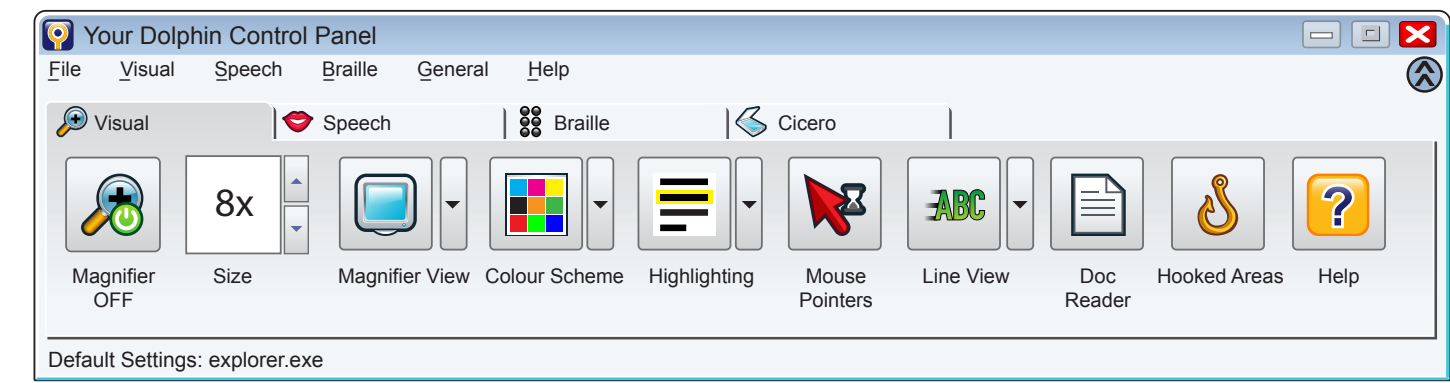

Lunar's flexible colour changer ensures your total screen comfort. Switch to colours that are easier on your eyes or boost contrast, reverse white text onto a restful black background. Or try yellow on blue, or any of the other 23 high contrast colour schemes. Find the one that's perfect for you or it's simple to create your own colour scheme.

Quit Lunar and your desktop returns to your standard Windows settings - great if you share a PC. Open Lunar again, you'll find your own personal settings for magnification size, magnification views and high contrast colours are all ready and waiting for you. Lunar makes your computer easier to use, returns your independence and no user training is required.

Need that bit extra?

The added speech of LunarPlus is ideal to give you an afternoon boost by reading out most of what's on screen. It's not a full Screen Reader, but it does give you speech support to boost your accuracy and productivity when your eyesight starts to flag. Visit the Dolphin website to read a full list of the speech differences between LunarPlus and SuperNova.

Screen Reader with Braille support

Hal is an incredibly versatile screen reader with a strong reputation for flexibility and stability even in the toughest of environments. But what makes Hal really stand out is the way that it will grow with you. Start straight from the box with the intuitive standard settings and it's easy to get going. Ready at your finger tips you can read a whole document, read the line, spell a word and all with individual keystrokes. As you become more familiar with Hal, you can tailor your screen reader to suit you, your work and home environment in every way.

Hal's powerful screen reading engine is closely supported by your favourite speech synthesisers; Eloquence, RealSpeak or Orpheus - you decide. Tweak the speed, verbosity and voice to instantly control how much information Hal gives you and when. You'll appreciate Hal's attention to detail too, like the way it tells you something has changed on screen, such as a page number, or that a reply is on its way when instant messaging.

With Hal's powerful screen reading capabilities, you don't have to see the screen to make full use of the Windows environment or the Internet beyond. Hal's newly re-engineered web support provides the power to navigate and interact with even the most complex web pages including: social networking sites, shopping online or other web-based applications.

Hal Screen Reader describes on-screen information to you using speech or via a refreshable Braille display, providing literary or computer Braille, Grades 1 and 2.

Turn the printed word into Speech

Looking for an easier, more private way to read letters and other print documents? Cicero takes your computer and scanner and effectively turns them into a simple-to-use reading machine. Just place your text document on the scanner and Cicero will translate it into speech, or Braille via your refreshable Braille display. You can even magnify and alter the on-screen colours so that it's easier on your eye. Save or edit your newly scanned text, or scan and read more pages to listen and build a larger document. Alternatively send the text to your word processor or Braille software and embosser.

Unlock the potential of any PC

If you need to use more than one PC, the Dolphin Pen makes it simple to take your favourite Dolphin access software with you where ever you go. Choose from Lunar or LunarPlus Screen Magnifiers, Hal Screen Reader or the very best of both Worlds with SuperNova's integrated Screen Magnification and Screen Reading with Braille display Support.

The Dolphin Pen is a liberating little thumb drive, allowing you access to your favourite Dolphin software on most Windows PCs. The Dolphin Pen delivers your preferred Dolphin speech, Braille and/or magnification features, complete with your own unique settings intact.

There are so many places you might want to use a PC apart from a dedicated workstation - whether it's hot-desking at work, school or university, researching in a library or at a client's office, relaxing at a friend's house or picking up email at an Internet Café overseas. With a lightweight, robust Dolphin Pen in your pocket, you can unlock the potential of any PC wherever you go and make it work for you.

There's no need to carry bulky CDs around to install your access software - or to obtain multiple licences to use different PCs.

The Dolphin Pen II boasts brand new partitioned hardware with the aim of being incorruptible. Your Dolphin software is protected from file corruption and a separate storage area means you can also take other files around with you, anything from work-in-progress to your favourite music!

Try the affordable Dolphin Pen for yourself, with Dolphin's 30-day no quibble money-back guarantee. You'll find it gives you more flexibility, independence and control to get on with your life and work, wherever you need access to a PC.

Making the inaccessible, Accessible

Not all applications are truly accessible and may result in low productivity, prove generally tricky or just plain inaccessible for visually impaired people. But Dolphin Scripting can remove these shared frustrations by creating a bespoke 'script' that ensures your systems are seamlessly speech, magnification and Braille compatible.

Companies, government departments and other organisations can ensure their disability legislation compliance by optimising their accessibility for their low vision and blind clients.

The possibilities are truly endless with Dolphin Scripting.

Ask about our onsite Scripting consultations or visit www.YourDolphin.com/Scripts for more information.

All Dolphin access software comes with a 30-day money back guarantee and full lifetime product support by telephone or email. To find out more, try a FREE Demo or for pricing please visit www.YourDolphin.com or call our friendly sales team on 0845 130 53 53
